

**PATIENT**

Dexter Bruno

**SPECIES**

Feline

**BREED**

Domesti Shorthair

**SEX**

Neutered male

**AGE**

8 years

**WEIGHT**

11.9 lbs

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Dr. Barnea

**HOSPITAL NAME**

Tenaflly VC

**REFERRING VET**

Dr. Han

**INVOICE**

32360

**DATE**

8/16/22

**PRESENTING CLINICAL SIGNS**

History: had regenerative anemia (RBC 4.9/ hct: 21: 7/22/2022) and was on on and off pred 5mg sid . negative to fiv/felv/ other infectious disease ( anemia pcr i negative ) . anemia condition got improved .(rbc:6.9/ hct: 36: 8/10/2022).

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The right kidney measured 4.07 cm. The left kidney measured 3.88 cm.

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient.

**Spleen**

The **spleen** in this patient was mildly enlarged with uniform parenchyma and was folded upon itself caudally. This is a positional variant and is not pathological. There was no evidence of significant disease.

**Liver**

The **liver** revealed slight coarse architecture with mildly increased portal markings and minor uniform enlargement. There was on evidence of significant disease. The gallbladder was collapsed and unremarkable.

**Gastrointestinal**

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

**PATIENT**

**Pancreas**

Dexter Bruno

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**SPECIES**

Feline

**ULTRASONOGRAPHIC FINDINGS**

**BREED**

Domesti Shorthair

Structurally unremarkable abdomen with minor hepatic enlargement and minor remodeling.

**SEX**

Neutered male

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

FNA of the liver is indicated if liver enzyme elevations occur. The cause of anemia was not evident from a visceral standpoint.
