

PATIENT

Buss Ross

PRESENTING CLINICAL SIGNS

History: gastric obstruction, consumed dog rib bone

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized, and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

BREED

DSH

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The right kidney measured 4.04 cm. The left kidney measured 4.0 cm.

SEX

Male

AGE

1 Year

Adrenal Glands

The regions of the **adrenal glands** revealed no evident pathology.

WEIGHT

9.8 Pounds

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

Liver

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

IMAGING PERFORMED BY

Jenn

HOSPITAL NAME

Rockaway AH

Gastrointestinal

Progressively soft shadowing **gastric** luminal material was noted in this patient, consistent with hairball, stuffing or similar, measuring approximately 3.0 cm. The small intestine and colon were unremarkable.

REFERRING VET

Dr. Maniar

Pancreas

INVOICE

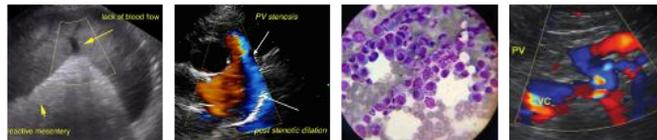

17032

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

DATE

8/25/22

ULTRASONOGRAPHIC FINDINGS

PATIENT

- Gastric retention, not typical of bone material, however, other soft material appears to be present

Buss Ross

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SPECIES

I recommend 24-hour NPO and recheck sonogram of the stomach at that time.
