

**PATIENT**

Luna Souders

**SPECIES**

Feline

**BREED**

DSH

**SEX**

Spayed Female

**AGE**

6 Months

**WEIGHT**

5.95 Pounds

**INTERPRETED BY**

Eric Lindquist, DMV

DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Heather

**HOSPITAL NAME**

ACC Flanders

**REFERRING VET**

Dr. Casulli

**INVOICE**

40733

**DATE**

8/25/22

**PRESENTING CLINICAL SIGNS**

vomiting, ADR, x rays done and cerenia inj. given was given dexdomitor IM for sedation?

Abnormal PE/Chem/CBC/UA Results: ALT - 103 (hi)

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 3.0 cm. The right kidney measured 3.0 cm.

**Adrenal Glands**

The regions of the **adrenal glands** were unremarkable.

**Spleen**

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

**Liver**

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**Gastrointestinal**

The **gastrointestinal tract** was largely unremarkable. Trace amount of ingesta noted in the stomach. Minor fluid filled cecum, yet no obstructive disease. Reactive mesenteric lymph nodes noted up to 0.60 cm in width.

**Pancreas**

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**ULTRASONOGRAPHIC FINDINGS**

- Structurally unremarkable abdomen

**PATIENT**

Luna Souders

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

No evidence of foreign body or obstruction. Supportive care for enteritis should prove effective.
