**PRESENTING CLINICAL SIGNS**

Bella is an eight year old, FS, Maltese mix who presented for abdominal ultrasound on 8/16/21. Dr. Lindquist read the study which showed a 0.3 cm splenic nodule and mild amounts of free fluid accumulation at the caudal fold. Recheck brief exam today for monitoring the spleen. "Spleen The spleen presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. A hypoechoic splenic nodule was noted in the mid spleen and measured 0.3 cm. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted." "Free Abdomen Slight free fluid was noted adjacent to the spleen at the splenic fold. This may be an accumulation owing to positional change. However, this should be monitored. "

**LIMITED ULTRASONOGRAPHIC EXAMINATION**

Multiple images primarily of the spleen were submitted. Parenchyma was uniform. Vascularity was uniform. The prior nodule was not visualized and therefore was likely a hyperplastic nodule, which can disappear, or it may have represented a splenic abscess or suppurative lesion that has since resolved.

**ULTRASONOGRAPHIC FINDINGS**

- Resolved splenic nodule

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

No further imaging recommended.

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Dr. Jennifer Todd

**HOSPITAL NAME**

Lambs Gap AH

**REFERRING VET**

Dr. Laura Campbell

**INVOICE**
