

PATIENT

Ahsoka Aviles

PRESENTING CLINICAL SIGNS

History: Please see previous history (Case was previously submitted).

SPECIES

Canine

ULTRASONOGRAPHIC EXAMINATION OF THE HEART

The pulmonic and aortic velocities were adequately imaged. The aortic outflow velocity was mildly excessive at 2.5 m/sec. The aortic valve appeared unremarkable. Pulmonic outflow velocity measured 1.9 m/sec with normal laminar flow.

BREED

French Bulldog

ULTRASONOGRAPHIC FINDINGS

SEX

Spayed female

Mildly increased left ventricular outflow velocity, subjectively benign.

Possible minor form of subaortic stenosis, yet idiopathic outflow velocity is entirely possible.

Benign murmur, not clinically significant.

AGE

1 year

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

WEIGHT

20 lbs

There is no significant structural changes noted with any of the valves. There is no evidence of PDA as color flow assessment of the deep pulmonary artery was normal.
