

PATIENT

Kira Doremus

PRESENTING CLINICAL SIGNS

xrays show concern for an underlying growth checking to see if patient is ok for anesthesia

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

BREED

DSH

SEX

Spayed Female

The **kidneys** revealed largely normal size and structure, corticomedullary definition and ratio (cortex 1/3 of medulla) were essentially maintained with some age-related loss of curvilinear patterns regarding the capsule and C/M junction. The cortices presented largely uniform texture with some increased echogenicity expected for his age patient. Medullary structure differed distinctly from that of the cortex and no evidence of pelvic dilation was present. The right kidney measured 3.74 cm. The left kidney measured 4.22 cm.

AGE

11 Years

Adrenal Glands

The regions of the **adrenal glands** were unremarkable.

WEIGHT

10.5 Pounds

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

INTERPRETED BY

Eric Lindquist, DMV

Liver

The **liver** was mildly enlarged, slightly swollen and irregular, primarily in the left limb. This may be a normal variant. However, if liver enzyme elevations are present then FNA would be indicated. The gallbladder and common bile duct were unremarkable.

DABVP, Cert. IVUSS

IMAGING PERFORMED BY

Jenn

Gastrointestinal

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

HOSPITAL NAME

Rockaway AH

REFERRING VET

Dr. Maniar

Pancreas

The **pancreas** was hypoechoic and irregular in the left limb.

ULTRASONOGRAPHIC FINDINGS

- Prominent, irregular pancreas
- Enlarged liver
- Unremarkable abdomen otherwise
