PRESENTING CLINICAL SIGNS

Vomiting, eating grass, diarrhea - r/o: dietary indiscretion r/o: HGE, pancreatitis, parasites, open. Dental disease. Overweight.

ABNORMAL Labwork Values: AMYL 433 Current Medications: None

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The bladder is moderately distended with anechoic urine. No uroliths are seen. The bladder wall is normal in appearance and thickness. No masses are seen.

The right kidney presents normal size (approx. 7.8 cm) with normal shape and architecture. Normal corticomedullary distinction. No pyelectasia, ureteral dilation or nephrolithiasis.

The left kidney presents normal size (4.7 cm) with normal shape and architecture. Normal corticomedullary distinction. No pyelectasia, ureteral dilation or nephrolithiasis.

Adrenal Glands

The right adrenal gland presents normal shape and homogenous parenchyma. The phrenic vasculature is unremarkable. The cranial pole measures 8.0 mm and the caudal pole measures 6.0 mm.

The left adrenal gland presents normal shape and homogenous parenchyma. The phrenic vasculature is unremarkable. The cranial pole measures 4.8 mm and the caudal pole measures 5.2 mm.

Spleen

The spleen is normal in size, shape, margination and echogenicity. No masses are seen.

Liver

The liver presents normal size and shape with smooth lobar margins. The parenchyma has normal echogenicity with normal echotexture. No focal lesions are seen. Intrahepatic bile ducts are normal. Normal vascular pattern.

The gallbladder presents normal size with anechoic contents. Normal gallbladder wall. No evidence of bile duct distention or obstruction.

Gastrointestinal

The stomach and intestines have normal wall layering and thickness. Colon contains normal contents with normal wall thickness.

Pancreas

The visible pancreas is normal in size with normal echogenic parenchyma and surrounded by normal peri-pancreatic mesentery.

Free Abdomen

There are no enlarged abdominal lymph nodes seen on this exam. No free abdominal fluid is seen.

ULTRASONOGRAPHIC FINDINGS

- Normal abdominal ultrasound.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

No significant abnormalities identified. No cause for the patient's GI signs seen. Differentials for the patient's intermittent diarrhea and vomiting include dietary indiscretion. Given the report of hematochezia, hemorrhagic enteritis is not suspected. Pancreatitis is possible but no evidence seen on this exam. Recommend submitting a Texas A&M GI panel to screen the patient for occult chronic gastrointestinal disease and/or occult pancreatic disease. Recommend full screening for GI parasites via a fecal pathogen PCR. Recommend supportive care with antiemetics, appetite stimulants if needed, and consider adding a fiber product for the patient's diarrhea.
