DATE

5/27/26

PRESENTING CLINICAL SIGNS

P is presented for having brown colored urine.

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The bladder is moderately distended with anechoic urine. No uroliths are seen. The bladder wall is normal in appearance and thickness. No masses are seen.

The right kidney presents normal size (5.0 cm) with normal shape and architecture. Normal corticomedullary distinction. No pyelectasia, ureteral dilation or nephrolithiasis.

The left kidney presents normal size (5.3 cm) with normal shape and architecture. Normal corticomedullary distinction. No pyelectasia, ureteral dilation or nephrolithiasis.

ULTRASONOGRAPHIC FINDINGS

- Normal bladder and kidneys.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

No cause for patient's pigmenturia seen on this exam. It is reported that it is due to hematuria. Given the patient's young age and that it does appear the patient is an intact female, rule out that the patient may be in estrus. Also, if no other identifiable cause is determined, recommend cystoscopy to evaluate for possible renal hematuria or other causes within the urinary tract not seen on this ultrasound. This exam only contained images of the patient's urinary tract. No images of other organs were provided for review.
