

PATIENT	PRESENTING CLINICAL SIGNS
Sassy Seeley	Sassy is not interested in eating anything not even treats. She did throw up bile the other day. She had Bloody mucousy diarrhea in the room this morning. She is drinking very little water. Abnormal PE/Chem/CBC/UA Results: SLIGHTLY TACKY(MILD DEHYDRATION) TENSE AND PAINFUL TO ABDOMINAL PALPATION. SLIGHT DEHYDRATION Lab panel Pending
SPECIES	
Canine	RADIOGRAPH OF THE ABDOMEN
	2x RLR, 2x VD
BREED	RADIOGRAPHIC FINDINGS
Chihuahua Mix	The body condition score is 6/9 with smooth alternating layers of fat and soft tissue opacity.
SEX	The bony structures are within normal limits.
FS	The liver is located within the costal arch and the caudo-ventral lobe is pointed.
	The spleen appears physiological.
AGE	The stomach contains a small amount of air; the small intestinal loops have a physiological distribution and size. Two loops in the left caudal abdomen contain gas and are in close proximity to one another. Colon and rectum are empty.
1 Year, 7 Months	
INTERPRETED BY	The left renal shadow has a physiological size, shape and opacity; the right is obscured by intestinal loops. The bladder is located in the abdominal cavity and contains a small amount of homogeneous fluid opacity.
Heike Rudolf, DVM, Dr. med. Vet., DipECVDI DVR	The sublumbar region appears physiological.
HOSPITAL NAME	RADIOGRAPHIC DIAGNOSIS
Elizabeth Animal Hospital	<ul style="list-style-type: none"> Localized ileus, very mild
REFERRING VET	INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS
Kim Allyn, DVM	The changes are non-specific and could be due to physiological intestinal motility or the result of intestinal pathology such as enteritis or a slow moving, small soft tissue object. Abdominal ultrasound is recommended to assess GIT wall thickens and layering. The pancreas should be assessed for pancreatitis and mesenteric inflammation. Pending the blood analysis supportive treatment (i.v. fluids, pain killers and antiemetics) should be continued.
