PRESENTING CLINICAL SIGNS

History: VERY SUDDLE SHIFTING OF HIND LIMB LAMNES AND PAIN O EXTENSION OF HIPS . DURATION OF PAIN IS ABOUT 3 WEEKS IMPROVED ON CAPROFEN AND GABAPENTIN FOR 2 WEEKS AND REST BUT NOT RESOLVED

RADIOGRAPHIC STUDY OF THE LUMBAR SPINE

The surrounding soft tissue structures appear physiological.

The facet joints are clearly outlined. No evidence of osseous destruction or lysis is present along the spine.

T13-L3: ventral spondylosis is present.

T12-L1 and L2/3: disc space width is reduced.

T13/L1: reduced size foramen.

RADIOGRAPHIC DIAGNOSIS

- Reduced disc spaces T13/L1, L3/4
- Reduced foramen T13/L1

Incidental finding

- T-L spondylosis

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

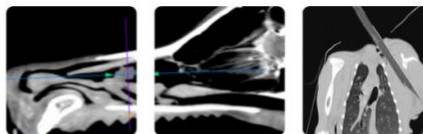

The radiographic changes indicating disc disease are long standing and may not represent an acute incident. Cord compression can only be identified with myelography or in cross-sectional imaging. Thus, CT or MRI is recommended.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance, please contact me.
