

PATIENT

Romeo Peyton

PRESENTING CLINICAL SIGNS

History: history of cough (suspect tracheal collapse) and occasional limping; o reports limping worse front left limb; pain on L shoulder palpation

SPECIES

Canine

Abnormal PE/Chem/CBC/UA Results: PE-pain on L shoulder region

RADIOGRAPHIC STUDY OF AND C-SPINE AND SHOULDERS

C-Spine

BREED

Yorkie

The surrounding muscles and fat layers appear physiological.

No signs of aggressive osteolysis have been identified.

SEX

Neutered Male

Ventral spondylosis is present at C4-7 where also disc space reduction is visible.

Shoulders

The shoulder joints appear congruent with even subchondral bone surfaces.

AGE

10 Years

The long bones have a normal trabecular structure and a smooth surface. Cortical-medullary development and differentiation are physiological.

RADIOGRAPHIC DIAGNOSIS

C4-7

INTERPRETED BY

Heike Rudorf, DVM,
Dr. med. Vet.,
DipECVDI DVR

- Decreased disc spaces
- Spondylosis
- Tracheal collapse

HOSPITAL NAME

Boca Park AH

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The presence of disc space reduction can be incidental or associated with spinal cord compression due to disc extrusion. Cord compression can only be identified with myelography or cross-sectional imaging. Depending on the severity of the clinical signs, which may necessitate surgical intervention, CT or MRI is advised; neuritis and brachial plexus tumour should also be looked for.

REFERRING VET

Morgan Spaulding

The tracheal collapse described in the history is visible.
