

PATIENT **PRESENTING CLINICAL SIGNS**

Choko Yu History: Not eating or eating little after anesthesia for dental work 4 days ago. Protruded 3rd eyelid & miosis on the right eye (horner's syndrome), Possible otitis media. No bowel movement for 2-3 days.

SPECIES Abnormal PE/Chem/CBC/UA Results: Neutropenia

Feline **RADIOGRAPHIC STUDY OF THE ABDOMEN**

The body condition score is 7/9 with a large amount of intraabdominal fat.

BREED The bones are well mineralized with good trabecular structure and smooth surfaces. The ventral L7/S1 disc space shows a small amount of calcification and a small osteophyte is present on the cranio-ventral endplate of T13.

DSH

SEX The abdominal detail is good; diaphragm and abdominal wall are intact.

Neutered Male The liver is located within the costal arch and the caudo-ventral lobe is pointed.

The spleen appears physiological.

AGE The stomach contains a very small amount of air on the VD view only; the small intestinal loops occupy the central abdomen and appear of homogeneous and physiological size. Colon and rectum contain a moderate amount of fecal matter, which is well formed in the rectum.

5 Years

INTERPRETED BY Both renal shadows have a physiological size, shape and opacity; the surfaces are smooth. The bladder is located in the abdominal cavity and contains a moderate amount of homogeneous fluid opacity.

Heike Rudolf, DVM,
Dr. med. Vet.,
DipECVDI DVR

The region of the sublumbar lymph nodes appears physiological.

RADIOGRAPHIC DIAGNOSIS

- Formed feces in rectum

HOSPITAL NAME

Incidental findings

Creditview-Eglinton
AH

- Spondylosis, minimal
- Calcification L7/S1 disc space

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

I can see no underlying cause for the unwillingness to eat but can imagine that the mouth is still painful after the dental work. A considerable amount of feces is present in the large intestine, thus some food has must have found its way into the stomach in the past 24 hours.
