

PATIENT PRESENTING CLINICAL SIGNS

Liza Marinaro Intermittent Limping

RADIOGRAPHIC STUDY OF RIGHT FORELEG AND FOREPAWS

SPECIES 1x lateral foreleg shoulder to carpus, 1x DP paws

Canine

RADIOGRAPHIC FINDINGS

BREED The skin surfaces are smooth and the muscles appear well developed.

Pit Bull The bones are well mineralized, have a normal trabecular structure and smooth, continuous surfaces. Cortical-medullary development and differentiation of the long bones are physiological.

SEX The shoulder joints appear congruent with even subchondral bone surfaces.

Spayed Female The elbow joint appears to be congruent with smooth subchondral bone surfaces. New bone formation is not obvious.

RADIOGRAPHIC DIAGNOSIS

- AGE** 8 Years
- Normal joints

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INTERPRETED BY I can find no explanation for the clinical signs on the one image of shoulder and elbow.
