

PATIENT

Cooper Miller

PRESENTING CLINICAL SIGNS

History: O stop medication about 6 days ago because P was peeing a lot more and also started bleeding from the tail, P has a rash on the stomach. ok e/d/u/d no c/s/v/d

SPECIES

Canine

Abnormal PE/Chem/CBC/UA Results: Radiographs- send for review recommended consider schedule skin biopsy and culture- O declined for now

RADIOGRAPHIC STUDY OF THORAX AND ABDOMEN

BREED

Mixed

A skin nodule is present at the side of the ID chip and the subcutaneous tissue surrounding the chip is increased in size and opacity. Cranial to the soft tissue swelling the skin is elevated and the thickened subcutaneous tissue surrounds fat containing soft tissue strands.

SEX

Neutered Male

The bony structures appear physiological.

Thorax

AGE

11 Years

The lungs are in contact with the thoracic boundaries and the tips are pointed. The lobar vessels are clearly visible. The bronchial tree is thin walled and tapers uniformly towards the periphery.

The cranial mediastinum is of physiological size and opacity. The trachea diverges from the thoracic vertebrae and the carina is located at T5.

INTERPRETED BY

Heike Rudolf, DVM,
Dr. med. Vet.,
DipECVDI DVR

The cardiac silhouette occupies 75% of the chest height and 2.5 intercostal spaces (VHS 9.5). No chamber or outflow tract enlargement is evident.

Abdomen

HOSPITAL NAME

Animal Paradise
Hospital

The abdominal detail is good; diaphragm and abdominal wall are intact.

The liver is located within the costal arch and the caudo-ventral lobe is pointed.

The spleen appears physiological.

REFERRING VET

Dr. Mostafa Elshafie

The stomach contains a small amount of air; the small intestinal loops have a physiological distribution and size. Colon and rectum contain a small amount of fecal matter.

Both renal shadows appear to have a physiological size, shape and opacity. The bladder is located in the abdominal cavity and contains a small amount of homogeneous fluid opacity.

INVOICE

12797

The sublumbar region appears physiological.

RADIOGRAPHIC DIAGNOSIS

DATE

12/2/21

PATIENT

Cooper Miller

- Reaction around ID chip

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SPECIES

Canine

The skin reaction around the ID chip could represent infection, tumor or granuloma. Further examination may include ultrasound and sampling or removal.

BREED

Mixed

SEX

Neutered Male

AGE

11 Years

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

INTERPRETED BY

Heike Rudolf, DVM,
Dr. med. Vet.,
DipECVDI DVR

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
