

**PATIENT PRESENTING CLINICAL SIGNS**

**PATIENT** Goldie Ojeda **PRESENTING CLINICAL SIGNS** History: This is a reoccurring problem blood in urine again, P is urinating on the couch, started 2 to 3 days ago e/d/u/d ok no c/s/v/d P is on RX food,, O wants to know what can be done to avoid this from happening BAR, mm-pink, CRT<2sec, EENT, H/L, Abdo, U/G, skin and coat, BC 7/9 FLUTD Dental tartar overweight

**SPECIES**

Feline

**RADIOGRAPHIC STUDY OF THE THORAX AND ABDOMEN**

The body condition score is 8/9 with smooth alternating layers of fat and soft tissue opacity.

**BREED**

The bony structures appear physiological.

DSH

**Thorax**

**SEX**

The lungs are in contact with the thoracic boundaries and the tips are pointed. The lobar vessels are visible. The bronchial tree is thin walled and tapers uniformly towards the periphery.

Neutered Male

The cranial mediastinum is of physiological size and opacity. The trachea diverges from the thoracic vertebrae and the carina is located at T6.

**AGE**

8 Years

The cardiac silhouette occupies 75% of the chest height and 2 intercostal spaces. No chamber or outflow tract enlargement is evident.

**INTERPRETED BY**

**Abdomen**

Heike Rudolf, DVM,  
Dr. med. Vet.,  
DipECVDI DVR

The abdominal detail is good; diaphragm and abdominal wall are intact.

The liver is located within the costal arch and the caudo-ventral lobe is pointed.

**HOSPITAL NAME**

Animal Paradise  
Hospital

The spleen appears physiological.

The stomach contains a small amount of air; distribution and size of the small intestinal loops appear physiological. Colon and rectum contain a moderate amount of gas and some fecal boluses.

**REFERRING VET**

Dr. Elshafie

Both renal shadows have a physiological size, shape and opacity; the surfaces are smooth. The bladder shadow is not obvious.

The sublumbar region appears physiological but is superimposed by the upper thigh muscles.

**INVOICE**

15066

**RADIOGRAPHIC DIAGNOSIS**

- No obvious bladder shadow
- Obesity

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**DATE**

5/5/22

**PATIENT**

Goldie Ojeda

The bladder shadow may be poorly visible because it does not contain a sizable quantity of urine and/or because it is superimposed by intestinal loops. Urinary tract ultrasound is recommended to identify if urinary crystals or an increased bladder wall are present. A sterile urine sample should be obtained and analyzed. Urethral or bladder neck pathologies seem unlikely as these would result in retention of urine.
