

PATIENT

Beaubea Beaudin

PRESENTING CLINICAL SIGNS

bloody discharge /urine coming from the private area even she is spayed long time ago ,but still EDUD , no VDCA
 Abnormal PE/Chem/CBC/UA Results: fever , BW r/o dehydration , azotemia , abd. x-ray sent for 2nd opinion.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

2x lateral, 1x VD

BREED

Greyhound

RADIOGRAPHIC FINDINGS

The body condition score is 6/9. An oval soft tissue opacity is located caudal to the rib cage and just dorsal to the ventral abdominal wall in one lateral view only.

SEX

Female Spayed

The bones are well mineralized with good trabecular structure and smooth surfaces. The disc spaces appear homogeneous in width.

The abdominal detail is good; diaphragm and abdominal wall are intact.

AGE

10 Years

The liver is located within the costal arch and the caudo-ventral lobe is pointed.

The head of the spleen appears physiological.

INTERPRETED BY

Heike Rudolf, DVM,
 Dr. med. Vet.,
 DipECVDDI DVR

The stomach contains a moderate amount of food; the small intestinal loops occupy the central abdomen and appear of homogeneous and physiological size. Colon and rectum contain a moderate amount of fecal matter. The proximal aspect of the descending colon shows a corrugated wall.

HOSPITAL NAME

St. Catherine's Animal
 Hospital

Only one renal shadow is clearly visible and has a length of 2x L2. The bladder is located in the abdominal cavity and contains a small amount of homogeneous fluid opacity.

The region of the sublumbar lymph nodes appears physiological.

REFERRING VET

Dr. Masoud

RADIOGRAPHIC DIAGNOSIS

- Smallish kidney
- Corrugated colonic wall
- Soft tissue mass cd. to rib cage

INVOICE

47167

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The renal size is on the lower end of the normal range and creatinine and urea should be checked. Ultrasound is recommended to assess the renal architecture. Corrugation of intestinal walls suggests inflammation and ultrasound is recommended to assess wall thickness and layering. The oval mass could represent an artefact under the dog or a superimposed abdominal wall mass such as fibroma.

8-28-21

PATIENT

Beaubea Beaudin

Bloody discharge from the vulva could be coming from the urinary tract due to infection or tumor; it may be related to a mass in the vagina or could be caused by a stump pyometra. Abdominal ultrasound is essential for further investigations. A sterile urine sample should be obtained at the same time and send for bacteriological and cytological examination.
