

PATIENT PRESENTING CLINICAL SIGNS

Ivy Rose Leybourne

History: John got home from errands and noticed P RF paw was swollen - approx 45min ago. Acting normal. E/D well. No c/s/v/d. No meds/supplements.

SPECIES

Feline

Abnormal PE/Chem/CBC/UA Results: Musculoskeletal: Swelling along right front carpal region and paw pad. Pt was uncomfortable on palpation of limb.

RADIOGRAPHIC STUDY OF THE RIGHT FRONT PAWS

BREED

DSH

An increased soft tissue opacity surrounds the paw, resulting in an undulating skin surface and splaying of the digits.

SEX

Spayed Female

The long bones are well mineralized and have a normal trabecular structure and smooth, uninterrupted surfaces. Cortical-medullary development and differentiation are physiological.

RADIOGRAPHIC DIAGNOSIS

- Soft tissue swelling right paw

AGE

4 Years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The swelling could be the result of infection, inflammation, hemorrhage or lymphedema. Contusion due to getting the foot stuck in a window or door, allergic reaction due to a sting or insect bite and cat bite abscess are potential causes. Ultrasound can help identify a possible foreign body or regions that are fluid filled to obtain guided FNAs.
