

PATIENT PRESENTING CLINICAL SIGNS

Piper Allmers History: chronic years of otitis externa. ear culture grew strep. treatment with antibiotics have improved condition significantly. on today's cytology heavy yeast in the ears. ear flush performed today, Claro applied in each ear, since owner cannot topically medicate readily, and disp Fluconazole and continued Convenia injection.

SPECIES RADIOGRAPHIC STUDY OF THE HEAD

Canine

The external ear canal is almost completely obliterated on the right and only marginally more air is present on the left side. Moderate wall calcification is located in both terminal ear canal walls but appears to be worse on the right. Both ventral bulla walls appear thickened.

BREED RADIOGRAPHIC DIAGNOSIS

Cockapoo

- Severe bilateral otitis externa
- Bilateral ventral bulla wall thickening

SEX INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Spayed Female

The changes are consistent with bilateral chronic disease and surgery (TECA) should be considered. Prior to this a CT examination should be performed to assess bulla contents and inner ear in case otitis media requires a more extensive approach.

AGE TECHNICAL COMMENTS

9 Years

Non-DICOM images were submitted. The transformation from DICOM to other formats reduces the image quality and only allows limited manipulation of the image. More subtle lesions can thus easily be missed. For the best possible imaging reports, I suggest submitting DICOM images in the future.
