

PATIENT

Molly Foote

PRESENTING CLINICAL SIGNS

Right hind swelling. noted for the last two days. Is currently on Vanectyl P, Apoquel, Cytopoint injection for allergies, Clavaseptin for UTI and Osrurnia. Swelling of the whole right hind limb with edema. Bloodwork report no special findings.

SPECIES

Canine

RADIOGRAPHIC STUDY OF ONE HIND PAW

2x lat. abdomen, 1x VD abdomen, 1x lateral and 1x cr-cd stifle, 1x lateral hind leg, 1x DP oblique hind paw

BREED

Bulldog

Hind paws only were requested.

RADIOGRAPHIC FINDINGS

SEX

Spayed Female

Marked soft tissue swelling surrounds digit 4 and 5. A small osteophytic spur is present on phalanx 1 digit 4.

The popliteal lymph node is large.

AGE

7 Years

RADIOGRAPHIC DIAGNOSIS

- Swelling digit 4 and 5
- Large popliteal lymph node

INTERPRETED BY

Heike Rudolf, DVM,
Dr. med. Vet.,
DipECVDDI DVR

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The enlarged popliteal lymph node suggests an infectious reason for the soft tissue swelling. Its size should be compared to the one of the other leg. FNAs should be obtained and submitted for bacteriological and histological examination. However, snake or insect bites can also result in severe swelling, so can thrombo-embolic disease. Ultrasound of the entire swelling may reveal a foreign body such as a grass awn.

Animal Hospital

TECHNICAL COMMENTS

No side marker on any image. Only jpg images were submitted. The transformation from DICOM to jpg reduces the image quality and only allows limited manipulation of the image. More subtle lesions can thus easily be missed. For the best possible imaging reports, I suggest submitting DICOM images in the future.
