PATIENT OBSERVATIONS

Hunter Ott

SPECIES

Canine

Liver: Submitted are 2 excellent videos of cells collected from the liver in Hunter. There are aggregates of hepatocytes scattered throughout. There is slight granularity to the cytoplasm of the hepatocytes but no other significant changes are identified there. In the surrounding red blood cells, there are scattered macrophages and neutrophils with many collections of round cells with round nuclei. These cells are lymphoid cells with prominent cytoplasm and large irregular nuclei. The nuclei are 2 to 4 times the size of red blood cells.
