**DATE**

10/20/2022

**PRESENTING CLINICAL SIGNS**

BW supports dx of hyperparathyroidism. Ultrasound for confirmation of parathyroid tumor and localize prior to surgery.

**ULTRASONOGRAPHIC EXAMINATION OF THE PARATHYROID*****Parathyroid Presentation***

The right thyroid lobe exhibited overall normal size, contour and homogeneous parenchyma subjectively measuring 1.4 cm x 0.3 cm. Within the right thyroid lobe, a well circumscribed spherical hypoechoic nodule measuring 0.4 cm x 0.3 cm was visualized. The nodule did not distort the thyroid capsule. No evidence of peripheral pathology around the right lobe was observed.

The left thyroid lobe was overtly normal in size, contour and parenchyma echogenicity measuring ~ 1.4 cm x 0.32 cm. A probable solitary visualized parathyroid gland within the left thyroid lobe measured 0.17 cm in diameter.

**ULTRASONOGRAPHIC FINDINGS**

- Right parathyroid nodule-probable adenoma

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Given diagnostic testing supportive of hyperparathyroidism in conjunction with the presence of a right parathyroid nodule, right parathyroidectomy is recommended.
