(Canine and Feline)

IMAGING PERFORMED BY

Kim Liedberg

HOSPITAL NAME

SVS Imaging WI

REFERRING VET

Dr. Bar/Dr. Thomas

INVOICE

26747

DATE

10/29/21

PRESENTING CLINICAL SIGNS

Needed a thyroid ultrasound prior to surgery. Possible hypercalcemia with a possible diagnosis of primary hyperparathyroidism.

Abnormal PE/Chem/CBC/UA Results: Parathyroid Hormone (CLIA) 12.10 H Ionized Calcium (ISE) 2.00 H

ULTRASONOGRAPHIC EXAMINATION OF THE NECK

The area of the right thyroid gland and subjective right parathyroid gland was sonographically unremarkable without overt evidence of nodules or tumors. Sonographic assessment of the left thyroid gland adjacent to the descending esophagus to the left of the sonographically unremarkable trachea revealed a solitary, well circumscribed, ovoid, hypoechoic nodule measuring approximately 0.54-0.57 cm in diameter.

ULTRASONOGRAPHIC FINDINGS

- Left solitary, well circumscribed, hypoechoic parathyroid nodule – suspect adenoma.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Given the presence of left parathyroid nodule in the face of hypercalcemia and elevated PTH levels, left parathyroidectomy is indicated.

PATIENT

Chelios Marte

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

SPECIES

Canine

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
