

PATIENT

Tabby Carrazana

SPECIES

Canine

BREED

Pit Bull X

SEX

Spayed Female

AGE

10 Years 6 Months

WEIGHT

64.3 Pounds

INTERPRETED BY

R. McKenzie Daniel,
DVM, DABVP
(Canine and Feline)

IMAGING PERFORMED BY

Dr. Rivera

HOSPITAL NAME

DPC Vet Hospital

REFERRING VET

Dr. Rivera

INVOICE

38885

DATE

6/19/22

PRESENTING CLINICAL SIGNS

culture is negative but lower urinary tract signs have persisted. abdominal radiographs to look for stones radiographs done reports states unremarkable urinary bladder/no mineralized lower urinary tract calculi are present. pet present today for ABD AUS
Abnormal PE/Chem/CBC/UA Results: no PE done today

LIMITED ULTRASONOGRAPHIC EXAMINATION

The urinary bladder was normal in size and tone with primarily anechoic urine. Minor focal dependent luminal mineral present, measuring approximately 0.40-0.50 cm diameter. No evidence of macrocalculi, inflammatory or neoplastic mural changes. The urethra was normal in structure and tone to a depth of 3.0 cm. No overt pathology in the area of the iliac trifurcation.

Normal size and margination were present in the kidneys. A normal 1:3 cortex / medulla ratio was maintained. The medulla and cortices were uniform in texture with some increased echogenicity and loss of corticomedullary symmetry and definition expected for the age of the patient. No evidence of pelvic dilation was present. Pinpoint areas of medullary mineral present. The right kidney measured 6.3 cm. The left kidney measured 6.7 cm.

ULTRASONOGRAPHIC FINDINGS

- Sonographically unremarkable urinary bladder with minor focal dependent mineral
- Mild chronic renal changes

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overall, no overt evidence of upper or lower urinary tract pathology, i.e. macrocalculi, cystitis, pyelonephritis, or neoplastic criteria. Potentially, this patient may be passing small to minor amounts of mineral. Assessment of the vulva and/or vaginal vault scoping may be indicated to rule out potential pathology that may be contributing to the patient's lower urinary tract signs, given lack of overt upper or lower urinary tract pathology.
