ULTRASONOGRAPHIC EXAMINATION FOR PREGNANCY CHECK

Reproductive System

Multiple subjective viable fetuses exhibiting heartbeats on color Doppler were present. Early skeletal mineralization was observed. Subjective normal appearing gravid uterus.

ULTRASONOGRAPHIC FINDINGS

- Confirmed pregnancy-several subjectively viable fetuses

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Evidence of skeletal mineralization coincided with reported breeding date. An accurate count of fetuses present was unable to be performed. Abdominal radiographs for fetus count prior to whelping is recommended.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.

R. McKenzie Daniel, DVM, DABVP (Canine / Feline Practice)
