

**PATIENT**

Leeloo Rivera

PRESENTING CLINICAL SIGNS

Limping on R front leg for 24 hrs and swelling noted on 3rd digit of R front paw. No pain when palpated.
Abnormal PE/Chem/CBC/UA Results: N/A.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE RIGHT FRONT LIMB

Dorsopalmar and oblique views of the right front paw totaling 2 images available for review.

BREED

Lab Mix

RADIOGRAPHIC FINDINGS

The radius and ulnar appear to be shortened and stunted with medial curvature of the radius and mild carpus valgus position.

SEX

Female Spayed

No evidence of articular injury of the carpal or metacarpal joints is seen.

Moderate uniform soft tissue swelling is seen circumferential to the distal and middle phalanges of the 3rd digit in the right front paw.

AGE

4

No evidence of aggressive bone lysis is seen.

RADIOGRAPHIC DIAGNOSIS

- Periphalarangeal soft tissue swelling in the 3rd digit in the right front paw.
- Suspect chondrodysplastic growth - unrelated to the reason of presentation and likely incidental.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals soft tissue swelling circumferential to the middle and distal phalanx of the right front paw's 3rd digit. The findings are unspecific and soft tissue trauma or inflammation, including foreign material related cellulitis, are considered most likely. Soft tissue neoplasia cannot be ruled out entirely but is less likely owing to the patient demographics. Sampling could be considered in case of doubt.
