

PATIENT

Bella Cleppe

PRESENTING CLINICAL SIGNS

Came for Spay. No clinical signs notes Exam findings and abnormal lab values: Heart murmur noted on exam. Opted for Presx panel level II (full cbc/chem) all WNL, Heart Murmur grade III No heart murmur listed on any prior exams

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

Right/left lateral and ventrodorsal views totaling 3 images available for review in jpeg format.

BREED

Rottweiler

Only jpg images were submitted. The transformation from DICOM to jpg only allows for limited manipulation of the image. For the best possible results, we suggest submitting DICOM images in the future. Please do not hesitate to contact us should you need any help with the submission process.

SEX

F

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

AGE

22 Months

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits. The vertebral heart score is 10.3.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

HOSPITAL NAME

SVS Imaging

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

REFERRING VET

Dr. Bittner

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

- Radiographically normal age related thorax.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

DATE

1-17-22

The radiographic study reveals no evidence of generalized cardiomegaly or specific chamber enlargement. Earlier stages of cardiac disease such as valvular stenosis and insufficiencies are radiographically occult. Hence, correlation with a cardiac echo is recommended for a full assessment.

PATIENT

Bella Cleppe

The radiographic presentation of the lung and bronchial tree is within normal limits. No evidence of mediastinal lymphadenomegaly is seen.
