

**PATIENT**

Jazz Wheeler

PRESENTING CLINICAL SIGNS

Fluoroscopy - airway evaluation Bark is different and he hacks occasionally
Abnormal PE/Chem/CBC/UA Results: *Fluoroscopy - airway evaluation Lateral x-ray attached in case it helps.

SPECIES

Canine

FLUOROSCOPIC STUDY OF THE CERVICAL & THORACIC TRACHEA

8 fluoroscopic studies available for review. 7 in lateral and 1 in ventrodorsal projections.

BREED

Sheltie

FLUOROSCOPIC FINDINGS

The opening of the arytenoid cartilages of the larynx was present and appeared synchronous.

SEX

Male Neutered

No evidence of redundant tracheal membrane or tracheal collapse was seen throughout the cervical and thoracic trachea during multiple respiratory cycles. A pull on the collar and apparent coughing or gagging were not associated with tracheal collapse as well.

There is no evidence of bronchial collapse level with the mainstem bronchi.

AGE

10 Years

Mild esophageal aerophagia was noted.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

- Normal dynamic fluoroscopy of the airways from the larynx to the mainstem bronchi.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The fluoroscopic study of the cervical and thoracic trachea did not reveal evidence of tracheal collapse. Dynamic tracheal disease did not appear to be forced by coughing / hacking or collar pull. As far as assessable, laryngeal motion appeared adequate and there was no evidence of bronchial collapse.
