

## PATIENT PRESENTING CLINICAL SIGNS

Shadow Rodriguez

- PAIN T-L region
- CP negative HL
- Motor positive , positive Deep pain
- Segmental reflexes increased
- anal tone positive
- Normal front limb and cranial nerves
- non ambulatory in the hind limbs

## SPECIES

Canine

## BREED

Toy Poodle

## COMPUTED TOMOGRAPHIC STUDY OF THE THORACOLUMAR SPINE

Plain study and myelogram are available for review.

## SEX COMPUTED TOMOGRAPHIC FINDINGS

FI

Mild intervertebral disc space narrowing of the T12-13 intervertebral disc space is seen.

## AGE

4yr

Mineralized material is extruded ventrally and slightly left-sided into the vertebral canal occupying ~ 60% of its cross-sectional area.

Severe dorsal and right-sided compression of the spinal cord is noted.

## INTERPRETED BY

Nele Eley (Ondreka),  
DVM Dr. med. vet.,  
DipECVDI

Multiple focal mineralization are noted in various thoracolumbar discs without significant canal compromise.

## COMPUTED TOMOGRAPHIC DIAGNOSIS

- Severe acute T12-13 mineralized disc extrusion causing marked dorsal and right-sided spinal cord compression
- Multiple chondroid disc degeneration

## HOSPITAL NAME

Animal Surgical  
Oceanside

## INTERPRETATION OF FINDINGS & FURTHER RECOMMENDATIONS

## REFERRING VET

Dr Infernuso

The CT study reveals severe spinal cord compression secondary to T12-13 mineralized disc extrusion. The extrusion is in the ventral and left epidural space and explains the non-ambulatory paraparesis. Urgent neurosurgical decompressive intervention should be considered given severe cord compression and non-ambulatory status.
