Muyita Ortega

PRESENTING CLINICAL SIGNS

COUGHING

Abnormal PE/Chem/CBC/UA Results: Oral cavity: Mild dental tartar Musculoskeletal: BCS = 7.5-8/9. Ambulatory x 4 Skin: Barbering on front paws, ventral thorax and abdomen. Good hair coat. No ectoparasites seen

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Lateral and ventrodorsal views of the thorax and abdomen totaling 3 images available for review.

BREED

DSH

RADIOGRAPHIC FINDINGS

The body condition score is mildly excessive.

SEX

SF

Thorax

Esophageal aerophagia is noted.

The degree of pulmonary inflation is moderate. A moderate generalized bronchial lung pattern is noted and evenly distributed throughout the lung.

AGE

7 Years, 10 Months

Course and width of the trachea are within normal limits. There is no evidence of mediastinal widening.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The cardiac silhouette presents within normal limits with no evidence of specific chamber enlargement. The vertebral heart score is 7.5.

Abdomen

The abdominal serosal detail is maintained.

HOSPITAL NAME

DPC Veterinary
Hospital

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

REFERRING VET

Dr. Rivera

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic tail is not seen.

INVOICE

56369

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DATE

1-24-23

The stomach is in its anticipated position and presents postprandial.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

PATIENT The colon is seen in the expected position and presents with appropriate content.

Muyita Ortega

RADIOGRAPHIC DIAGNOSIS

SPECIES

Feline

- Moderate generalized bronchial lung pattern.
- Normal radiographic presentation of the cardiovascular structures.
- Normal radiographic presentation of the abdomen.
- Obesity.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

BREED

DSH

The radiographic study reveals evidence of lower airway disease such as allergic lower airway syndrome or infectious bronchitis including viral, bacterial, parasitic, and protozoal. A clinical trial of treatment against feline asthma could be considered versus further definition by means of airway endoscopy with airway sampling.
