RADIOGRAPHIC STUDY OF THE THORAX

Right/left lateral and ventrodorsal views totaling 4 images available for review.

BREED

Bengal

RADIOGRAPHIC FINDINGS

The degree of pulmonary inflation is deep. A mild generalized bronchial lung pattern is noted and evenly distributed throughout the lung.

SEX

Female Spayed

Course and width of the cervical and thoracic trachea present within normal limits.

The vertebral heart score is 7.5. There is no evidence of cardiomegaly or specific chamber enlargement.

AGE

11 Years

The laryngeal anatomy and hyoid bone are within normal radiographic limits.

No mediastinal widening is noted.

INTERPRETED BY

Nele Eley, DVM
 Dr. med. Vet. DipECVDI

The mass effect of the thyroid gland mentioned in the patient history is not seen radiographically.

Moderate gastrointestinal aerophagia is noted.

RADIOGRAPHIC DIAGNOSIS

- Mild generalized bronchial lung pattern.
- Aerophagia.

HOSPITAL NAME

Lakeshore Woods
 Animal Hospital

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The presentation of the bronchial tree may be within age related normal limits. Allergic or infectious lower airway disease cannot be ruled out entirely. Correlation with the clinical findings recommended.

REFERRING VET

Dr. Sam Masoud

Normal laryngeal motion was not appreciated in the video supplementing the x-ray files. However, there was no correlation between the actual breathing motions of this patient and the laryngeal activity available.
