

PATIENT

Elli Desmarais

PRESENTING CLINICAL SIGNS

Coughing for 1 day. Bloodwork unremarkable

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Right/left lateral and ventrodorsal views totaling 6 images available for review.

BREED

Golden Doodle Mix

RADIOGRAPHIC FINDINGS

Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

Female Spayed

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits. The vertebral heart score is 10.1.

AGE

6 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVCI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

St. Catherine's Animal
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

REFERRING VET

Dr. Boctor

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

INVOICE

56042

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

DATE

1-7-23

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and

PATIENT

lower urinary tract.

Elli Desmarais

The stomach is postprandial. The stomach is in its anticipated position.

SPECIES

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Canine

The colon is seen in the expected position and presents with appropriate content.

BREED

Golden Doodle Mix

RADIOGRAPHIC DIAGNOSIS

- Normal radiographic representation of the thorax and abdomen.

SEX

Female Spayed

The radiographic study reveals no evidence of dynamic tracheal disease, bronchopulmonary disease, or cardiovascular pathology. The source of the coughing remains unclear. Radiographic signs and acute inflammation or irritation of the airway may lag behind the clinical course of the disease. Recheck radiographs, endoscopy, or other further measures could be considered in case of persisting clinical signs.

AGE
