RADIOGRAPHIC FINDINGS

Mild articular swelling of the left carpal joint is noted.

SEX

MN

There is moderate smooth new bone formation in the distomedial radius associated with the sulcus for the abductor pollicis longus tendon. Smooth new bone formation is seen at the laterodistal margin of the ulnocarpal bone. No evidence of subluxation or luxation is seen.

AGE

11 Years

The metacarpophalangeal and phalangeal joints present within normal limits.

The right carpus presents within normal limits except for mild signs of right abductor pollicis longus tendinitis.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

RADIOGRAPHIC DIAGNOSIS

- Left carpal arthropathy with articular swelling, degenerative joint disease, and chronic tenosynovitis of the abductor pollicis longus tendon.

HOSPITAL NAME

The Collegeway
Animal Hospital

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

No traumatic osseous injury or carpal luxation is seen. Ligamentous injury remains a potential. The remainder of the findings do support presence of mild degenerative joint disease of the left intercarpal joint as well as chronic tenosynovitis of the left abductor pollicis longus tendon.
