

## PATIENT

Macclosky Brennan

## SPECIES

Canine

## BREED

Golden Retriever

## SEX

Neutered Male

## AGE

4

## WEIGHT

88.2 lbs

## INTERPRETED BY

Nele Eley (Ondreka),  
DVM Dr. med. vet.,  
DipECVDI

## IMAGING PERFORMED BY

Dr. Kara Duh

## HOSPITAL NAME

Waterville Veterinary  
Clinic

## REFERRING VET

Dr. Kara Duh

## INVOICE

73001

## DATE

1/7/26

## PRESENTING CLINICAL SIGNS

Was at an ER until 3 AM for poss FBO. Concern for FBO on rad report. Presented to us this AM for repeat rads.

## RADIOGRAPHIC STUDY OF THE ABDOMEN

Right and left lateral and ventrodorsal views of the abdomen totaling 3 images available for review.

## RADIOGRAPHIC FINDINGS

The stomach contains heterogeneous granular material and gas, consistent with ingesta. The stomach is normal in size and position. No gastric dilation is identified. Small intestinal loops are within normal diameter and distribution. No plication, stacking, or focal gas trapping is seen. There is no evidence of radiopaque foreign material within the small intestine. The colon and cecum contain variable amounts of gas. The descending colon shows corrugation, compatible with colonic irritation, inflammation, or dysmotility. Serosal detail is preserved. No free peritoneal gas is detected.

## RADIOGRAPHIC DIAGNOSIS

- No radiographic evidence of gastrointestinal foreign body or mechanical obstruction at the time of imaging.
- Colonic corrugation, most consistent with gastrointestinal inflammation or functional motility disturbance.
- Gastric contents compatible with ingesta, delayed gastric emptying cannot be ruled out.

## INTERPRETATION OF FINDINGS & FURTHER RECOMMENDATIONS

The current radiographic findings do not support a mechanical gastrointestinal foreign body obstruction. The colonic changes may reflect transient inflammatory or dysmotility related gastrointestinal disease. If clinical signs such as vomiting, persistent diarrhea, abdominal pain, or laboratory abnormalities persist or worsen, abdominal ultrasonography is recommended for further evaluation of the GI tract and abdominal organs.
