

PATIENT PRESENTING CLINICAL SIGNS

Bella Wischart
SPECIES Canine
BREED Mastiff
SEX Female

History: Patient is presented today b/c over the last 6 months O's have noticed P loosing weight but is still eating normal with a good appetite & water intake has not changed. P is not vomiting nor is P having loose stool/diarrhea. O's are unsure about what could be causing the weight loss. O has also noted that pet is having more labored breathing that correlates with weight loss timeline. O also notes that P's energy & behavior is failry normal, P is a little slow but O feels that is related to P getting older.

Abnormal PE/Chem/CBC/UA Results: Physical Examination Key -- (N= Normal, A= Abnormal)
 Hydration: Appropriately hydrated Mentation: BAR EENT: No nasal discharge; clear no discharge
 OU; clean no exudate AU; No cough on tracheal palpation. Oral Cavity: No dental tartar present

CV/Respiratory: No murmur/arrhythmia or crackles/wheezing auscultated. Synchronous pulses, normal rate. Normal bronchovesicular sounds. Abd/GI: Soft non painful abdomen, no organomegaly, no abnormalities on abdominal palpation Uro/Perineum: N Musculoskeletal: Normal ambulation, no lameness noted. No pain on palpation of limbs, normal flexion/extension present in all joints of all limbs. BCS 5/9
 Neurological: Appropriate

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

AGE 6 Years
 Ventrodorsal view of the thorax and lateral view of the abdomen totaling 2 images available for review.

RADIOGRAPHIC FINDINGS

Abdomen

The mamils are prominent.

The urinary bladder is severely distended. No abnormal opacities are seen within the urinary bladder.

The stomach is postprandial. Mild aerophagia is noted.

The liver presents within normal limits.

Multiple spondyloses are seen within the caudal thoracic and mid lumbar spine.

Thorax

There is a congenital hemivertebra at T11.

The bronchopulmonary and cardiovascular structures present within normal limits.

No evidence of abnormal mediastinal widening is noted.

RADIOGRAPHIC DIAGNOSIS

- Distended urinary bladder.
- Normal radiographic presentation of the bronchopulmonary and cardiovascular structures.

PATIENT

Bella Wisheart

- Spondyloses and congenital vertebral malformation – unrelated to the reason of clinical presentation.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SPECIES

Canine

No specific cause of the weight loss can be identified radiographically.

Severe distension of the urinary bladder may be due to withholding urine.

BREED

Mastiff

Obstruction of the lower airways or the cardinal symptom of polydipsia and polyuria may require further medical workup.

SEX

Female
