

**PATIENT**

Rosie Schiff

PRESENTING CLINICAL SIGNS

Acute onset of right front paw, causing a limping
Abnormal PE/Chem/CBC/UA Results: sever pain around the right shoulder , BW unremarkable

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE SHOULDERS

Mediolateral view of the right shoulder and dorsoventral views of both shoulders totaling 3 images available for review.

BREED

Dachshund

RADIOGRAPHIC FINDINGS

The shoulders present within age related normal limits.

SEX

Female Spayed

Mild subchondral bone plate remodeling is seen as well as mild remodeling of the articular margins; however, no evidence of aggressive osteolytic lesions, traumatic osseous injury, or significant osteoarthritis is noted.

AGE

11 Years

The C3/4 intervertebral disc space appears to be mildly reduced in width on both the lateral and orthogonal projections.

RADIOGRAPHIC DIAGNOSIS

- Normal age related findings of the shoulders.
- Intervertebral disc disease C3/4.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

No osseous changes are associated with the patient's right shoulder that would explain the clinical signs. Obviously, soft tissue trauma or inflammation is still a potential.

HOSPITAL NAME

St. Catherine's Animal
Hospital

The possibility of cervical intervertebral disc disease should be considered as well. The narrowing of the intervertebral disc space C3/4 is mild and may represent uncomplicated disc degeneration; however, disc hernia cannot be ruled out as well.
