

PATIENT

Shauni Willie

PRESENTING CLINICAL SIGNS

not eating, lethargic,
Abnormal PE/Chem/CBC/UA Results: elevated lipase (pancreatic), bun elevated creatine elevated.

SPECIES

Feline

RADIOGRAPHIC FINDINGS

Thorax

BREED

Savannah

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

Spayed Female

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE

14 Years

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

St. Catherine's Animal
Hospital

Abdomen

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

REFERRING VET

Dr. Boctor

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INVOICE

47634

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic tail is not seen.

DATE

10-1-21

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

**PATIENT**

Shauni Willie

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

SPECIES

Feline

RADIOGRAPHIC DIAGNOSIS

- Normal age related thorax and abdomen.

BREED

Savannah

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic presentation of the thoracic and abdominal cavity is within age related normal limits. No obvious mass effect, cardiovascular, bronchopulmonary, or other pathology is seen radiographically. The patient is in thin body condition. Radiographically occult pancreatopathy and/or nephropathy cannot be ruled out and further definition by means of abdominal ultrasound and urinalysis could be considered in the context of the clinical history of this patient.

SEX

Spayed Female

AGE

14 Years
