

PATIENT

Penny Sullivan

PRESENTING CLINICAL SIGNS

NSF on exam, Lethargic, possibly fell at dog park

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE PELVIS

Ventrodorsal hip extended view of the pelvis and lateral view of the pelvis and stifles totaling 3 images available for review.

BREED

Husky Mix

The conformation of the coxofemoral joints is within normal limits.

Well-developed round femoral heads are deeply situated within the acetabular groove.

SEX

SF

There is no evidence of joint space incongruity.

The femoral head coverage is adequate.

No evidence of degenerative joint disease is seen.

AGE

2

The pelvic bones present symmetric and intact. There is no evidence of traumatic osseous injury.

RADIOGRAPHIC DIAGNOSIS

- Radiographically normal pelvis and coxofemoral joints.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the pelvis reveals no evidence of traumatic osseous injury. The coxofemoral joints present within normal limits as well.
