**DATE PRESENTING CLINICAL SIGNS**

10-25-21 Coughing on/off for past ~2 months, briefly saw improvement with antihistamines. Concern for tracheitis (allergic v infectious). Current medications: clavamox drops 0.6 mL PO bid, hydrocodone (5mg) w/ homatropine (1.5mg/5mL) 0.8 mL PO bid.

PATIENT

Peyton Devonish

RADIOGRAPHIC STUDY OF THE THORAX

Right/left lateral and ventrodorsal views totaling 3 images available for review.

SPECIES

Canine

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

BREED

Toy Poodle

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits. The vertebral heart score is 8.5.

SEX

Female Intact

The cranial mediastinum is widened by a thymic remnant which is considered within age related normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

AGE

6-12-2021

The degree of pulmonary inflation is moderate. A moderate generalized bronchointerstitial lung pattern is noted with even distribution throughout the lung. There is no evidence of alveolar pulmonary infiltrates.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

INTERPRETED BY

Nele Ondreka, DVM
Dr. med. vet.,
DipECVDI

The stomach is post-prandial.

RADIOGRAPHIC DIAGNOSIS

- Moderate bronchointerstitial lung pattern - otherwise, normal age related thorax.

HOSPITAL NAME

Claws n Paws Animal
Hospital

INTERPRETATION OF FINDINGS & FURTHER RECOMMENDATIONS

The radiographic findings are suggestive for lower airway disease with infectious tracheobronchitis such as viral, bacterial, and less likely parasitic or protozoal being one major differential diagnosis. Allergic/eosinophilic bronchitis cannot be ruled out. Further definition by means of airway endoscopy with airway sampling would be ideal. However, the patient's response to the initiated medical treatment can be awaited.

REFERRING VET

Dr. Singh
