

**PATIENT**

Gigi Cho/Weitzel

PRESENTING CLINICAL SIGNS

eating a lot but losing weight. occasional vomiting but otherwise acting normally
Abnormal PE/Chem/CBC/UA Results: Gallop rhythm, poor hair coat. periodontal dz, very thin
labs pending

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE ABDOMEN

Right lateral and ventrodorsal whole body views totaling 2 images available for review.

BREED

DLH

Abdominal read requested.

RADIOGRAPHIC FINDINGS

The patient is thin.

SEX

FS

Moderate degenerative lumbosacral stenosis with mildly narrowed intervertebral disc space,
vertebral end plate sclerosis, and spondylosis deformans is seen.

Multiple mineralizations appear to be associated with both kidneys.

AGE

15 Years

The splenic tail is seen and presents even and thin.

The radiographic presentation of the liver is within normal limits.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The stomach is post-prandial with a large amount of granulated material compatible with food.

The small intestinal loops are evenly distributed throughout the mid abdomen and reveal
predominance of a gas pattern; however, no evidence of abnormal dilation or plication is seen.

The colon contains a mild amount of fecal material and gas.

HOSPITAL NAME

Boca Park Animal
Hospital

RADIOGRAPHIC DIAGNOSIS

- Presumed bilateral hypercalcemic nephropathy.
- Post-prandial gastrointestinal tract without radiographically visible pathology.

REFERRING VET

Ensign

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

No structural pathology can be identified in the abdomen other than presumed bilateral
hypercalcemic nephropathy. Correlate with the laboratory values and consider abdominal
ultrasound in order to obtain more detailed information about the gastrointestinal tract's wall,
motility, content, and other associated organs such as the pancreas and biliary system.
