

PATIENT

Grace Stevenson

PRESENTING CLINICAL SIGNS

Loose stool

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Right/left lateral and ventrodorsal views of the thorax and right lateral and ventrodorsal views of the abdomen totaling 6 images available for review.

BREED

Domestic Short Hair

RADIOGRAPHIC FINDINGS

Abdomen

The patient is thin.

SEX

FS

The surrounding bony structures are within normal limits.

The abdominal wall is smooth and thin.

The serosal detail is reduced which is likely due to the thin body condition.

AGE

10

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic tail is not seen.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

HOSPITAL NAME

Animal Paradise
Hospital

Mild gastric aerophagia is noted.

The small intestinal loops are nondilated and appear to be evenly distributed throughout the mid abdomen.

The colon is empty which is compatible with the history of diarrhea.

REFERRING VET

Dr. Mostafa Elshafie

Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

INVOICE

47711

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits. Age related incidental redundancy of the aortic arch is seen.

DATE

10-6-21

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the

PATIENT

trachea is smooth.

Grace Stevenson

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

SPECIES

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

Feline

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

BREED

RADIOGRAPHIC DIAGNOSIS

Domestic Short Hair

- Thin body condition.
- Maldigestion pattern - otherwise, normal age related thorax and abdomen.

SEX

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

FS

No radiographic evidence of mechanical ileus is seen. The gastrointestinal tract appears to be mostly empty which is compatible with the history of diarrhea. A cause of the diarrhea cannot be identified radiographically. Consider further definition by means of ultrasound in order to gain more detailed information about the gastrointestinal tract, pancreas, biliary system, and other in case the clinical signs persist.

AGE

10
