

**PATIENT**

Mabelle Handley

**PRESENTING CLINICAL SIGNS**

Diarrhea started 6 days ago, improved for one day then diarrhea started again, was dark last night. Vomited 5 days ago two times, no vomit since then. Still eating well. Normal activity level. No history of garbage exposure, or diet change.

**SPECIES**

Canine

Abnormal PE/Chem/CBC/UA Results: Blood work indicate mild dehydration, increase in K 6.1, Na/K ratio 23.9, mild increase in Total Bilirubin 13 (9), otherwise the rest unremarkable / normal. Normal Lipase.

**BREED**

Cockapoo

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

1 right lateral view of the abdomen available for review. (Submission states there are 3 total images. There are 3 Dicom files in the uploaded folder, however, when viewed it's 3x the same image.)

**SEX**

Female Spayed

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

**AGE**

7 Months

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**HOSPITAL NAME**

St. Catherine's Animal  
Hospital

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

**REFERRING VET**

Dr. Bekhit

The colon is seen in the expected position and presents with appropriate content.

**RADIOGRAPHIC DIAGNOSIS**

**INVOICE**

47715

- Radiographically normal abdomen - no evidence of mechanical ileus.

**DATE**

10-7-21

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic presentation of the abdomen is within normal limits. There are no radiographic signs of mechanical ileus. A mild amount of ingesta appears to be within the gastrointestinal tract with concentration to the stomach and small intestine. The large intestine is mostly empty which correlates with the history of diarrhea. Consider fecal examination and conservative
