

**PATIENT**

Grace Hagen

**PRESENTING CLINICAL SIGNS**

Last couple of months not eating breakfast well. Gets excited for eating, but then doesn't. Does end up eating by dinner time. No vomiting.

Abnormal PE/Chem/CBC/UA Results: Elevated BUN @ 38 (6 - 31)

**SPECIES**

Canine

**COMPUTED TOMOGRAPHIC STUDY OF THE ABDOMEN**

Plain study available for review.

**BREED**

American Eskimo

**COMPUTED TOMOGRAPHIC FINDINGS**

Extensive atelectasis of the included lung is seen.

**Abdomen****SEX**

The assessment is limited to the availability of a plain study only.

FS

The right adrenal gland's cranial pole is plump in appearance and measures 12mm in diameter. The left adrenal gland presents within normal limits.

**AGE**

13 Years

The kidneys, spleen, liver, pancreas, and gastrointestinal tract reveal no overt abnormalities.

**COMPUTED TOMOGRAPHIC DIAGNOSIS****INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

- Nodular appearance of the right adrenal gland's cranial pole.
- No other abnormality noted.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS****HOSPITAL NAME**

Animal Health Care  
Denver

Limited study. The findings of the right adrenal gland may represent a normal variant. A cranial pole nodule with the differential diagnoses of early adenoma, adenocarcinoma, pheochromocytoma, myelolipoma, and incidentaloma cannot be ruled out entirely. If available, correlate with the ultrasonographic findings and consider obtaining a post-contrast study for a more detailed assessment of the abdominal viscera.
