**DATE**

11-15-22

**PRESENTING CLINICAL SIGNS**

Concerned of gradual weight loss and issues with diarrhea. Pt. has a good appetite. Pt. has a prior implant on hind limb and wants to have Pt. cleared medically of any health problems before going forth with repairing hind limb. Dr. Oran stated to consider neoplasia screening. Abdominal US performed in addition with these RADS.  
Abnormal PE/Chem/CBC/UA Results: None

**RADIOGRAPHIC STUDY OF THE THORAX**

Right/left lateral and ventrodorsal views totaling 4 images available for review in jpeg format.

Only jpg images were submitted. The transformation from DICOM to jpg only allows for limited manipulation of the image. For the best possible results, we suggest submitting DICOM images in the future. Please do not hesitate to contact us should you need any help with the submission process.

**RADIOGRAPHIC FINDINGS**

The degree of pulmonary inflation is moderate. A moderate generalized bronchial lung pattern with occasional peribronchial cuffing is noted.

The cardiac silhouette presents within normal limits. No evidence of overall cardiomegaly or specific chamber enlargement is seen. The pulmonary vasculature presents within normal limits.

Course and width of the trachea are considered within normal limits.

There is no evidence of mediastinal widening.

The thoracic boundaries present within normal limits.

**RADIOGRAPHIC DIAGNOSIS**

- Mild to moderate generalized bronchial lung pattern with no evidence of air trapping.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study reveals signs of lower airway disease. Clinical significance is uncertain. The findings however do suggest presence of bronchopneumopathy such as allergic lower airway syndrome versus infectious bronchitis including viral, bacterial, and less likely parasitic or protozoal. Consider further definition by means of airway sampling or a clinical trial of treatment for feline asthma in case of pertinent clinical signs.

**PATIENT**

Rufus Wood

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

**SPECIES**

Feline

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
