RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Right/left lateral and ventrodorsal views of the thorax and right lateral and ventrodorsal views of the abdomen totaling 5 images available for review.

RADIOGRAPHIC FINDINGS

SEX

Female Spayed

Abdomen

The surrounding bony structures are within normal limits.

AGE

6 Years, 6 Months

Two short linear metal opaque structures are seen in the cranioventral abdomen.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

HOSPITAL NAME

Ahwatukee Commons
Veterinary Hospital

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

REFERRING VET

Dr. Rebecca R.
Housley

The colon is seen in the expected position and presents with appropriate content.

Thorax

The surrounding bony structures are within normal limits.

INVOICE

48996

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

DATE

12-13-21

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

PATIENT

Bella Henkel

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

SPECIES

Canine

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

BREED

Lab Retriever Mix

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

- Radiographically normal age related thorax and abdomen.

SEX

Female Spayed

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax reveals no evidence of pulmonary metastatic disease. No structural bronchopulmonary changes are seen. There is no radiographic evidence of cardiovascular pathology. No abdominal organomegaly or mass effect is seen.

AGE

6 Years, 6 Months

The linear metal opacities are likely to represent foreign material that has penetrated the gastrointestinal tract at some point and typically these objects are inert in the mesenteric fat tissue without causing clinical signs.
