

PATIENT PRESENTING CLINICAL SIGNS

Bauer Pollock Excessive thirst, panting wt loss...
Abnormal PE/Chem/CBC/UA Results: Pending

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Canine Right lateral views of the thorax and abdomen provided for review.

RADIOGRAPHIC FINDINGS

BREED

Abdomen
Mixed Reduced serosal detail is seen in the ventral and mid abdomen. The abdominal volume is enlarged with pendulous ventral abdominal wall.

SEX

Neutered Male There appears to be generalized enlargement of the liver. The caudal margin of the liver presents border effacement with an irregular shaped soft tissue opacity with mass effect.
Caudal and dorsal deviation of the stomach and bowel is seen.

AGE

9 Years The retroperitoneal detail appears to be maintained.
Thorax
Moderate mid thoracic spondyloses are seen.

There is mild esophageal aerophagia.

INTERPRETED BY

Nele Eley (Ondreka), DVM Dr. med. vet., DipECVDI Multiple small interstitial pulmonary nodules of soft tissue opacity and varying size are seen throughout the entire lung field.
No evidence of pleural effusion or mediastinal lymphadenomegaly is seen.

RADIOGRAPHIC DIAGNOSIS

HOSPITAL NAME

New Bridge VP

- Cranioventral abdominal soft tissue mass with peritoneal effusion and multiple nodular interstitial lung pattern
- Spondyloses

REFERRING VET

Dr. Abina Glennon

The radiographic findings are highly suggestive for pedunculated hepatic or splenic mass with rupture and abdominal hemorrhage based on the presence of an interstitial nodular lung patter, which is highly suggestive for metastatic disease. Malignant neoplasia of the liver or spleen with metastatic disease to the lung is a primary consideration in this case, and should be assumed until proven otherwise. Further verification by means of ultrasound and sampling could be considered if the owner is interested in establishing a final diagnosis. However, the long-term prognosis is poor unfortunately.

PATIENT

Bauer Pollock

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

SPECIES

Canine

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
