

PATIENT

Monty Reilly

PRESENTING CLINICAL SIGNS

Doesn't want to jump

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE ELBOWS

Mediolateral and craniocaudal views of both elbows totaling 3 images available for review.

BREED

Domestic Short Hair

RADIOGRAPHIC FINDINGS

Both elbow joints present within age related normal limits. No evidence of osteoarthritic changes, traumatic osseous injury, or aggressive bone lesions is seen.

SEX

Female (S)

The corticomedullary definition is within normal limits for all long bones.

There is no evidence of subchondral bone defects.

RADIOGRAPHIC DIAGNOSIS

- Normal age related bilateral elbows.

AGE

5/1/2013

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

There is no evidence of structural pathology in the radiographs of the left and right elbows. Consider soft tissue pathology as well as neurologic disease as potential underlying causes.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

HOSPITAL NAME

Cottage Grove
Veterinary Clinic

REFERRING VET

DAmewood

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.
