

PATIENT

Perseus Dewey

PRESENTING CLINICAL SIGNS

Perseus is a 2y/o neutered male Bengal cat who has a history of anorexia and vomiting over the last 2- 3 days. On physical exam, he was lethargic but on abdominal palpation, it was unremarkable.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

Right/left lateral and ventrodorsal views totaling 3 images available for review.

BREED

Bengal

RADIOGRAPHIC FINDINGS

Wet fur artifact noted.

SEX

Neutered Male

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

AGE

2

The serosal detail appears to be reduced in the center of the abdomen in the region of the crowded small intestine.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic tail is not seen.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

HOSPITAL NAME

Beaches-Fallingbrook
Veterinary Clinic

The stomach contains a mild amount of gas.

The small intestinal loops appear to be bunched together in the mid abdomen with relatively static position and eccentric as well as looping gas patterns.

The colon is seen in the expected position and presents with appropriate content.

REFERRING VET

Dr. Sam Shahsavari

RADIOGRAPHIC DIAGNOSIS

- Suspect small intestinal plication and regional loss of serosal detail.

INVOICE

49268

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic findings suggest potential for small intestinal plication with linear foreign material or other as well as presence of reduced serosal detail in the same area. A timely abdominal ultrasound is strongly recommended in order to further verify the radiographic findings and rule out presence of linear small intestinal foreign material, if not performed already.
