RADIOGRAPHIC STUDY OF THE ABDOMEN

SEX

Right lateral and ventrodorsal views of the abdomen totaling 2 images available for review.

NM

RADIOGRAPHIC FINDINGS

AGE

The patient is obese.

7 Years, 9 Months

The abdominal serosal detail is maintained.

INTERPRETED BY

Nele Eley, DVM
 Dr. med. Vet. DipECVDI

The liver presents within normal limits.

The stomach is empty.

The small intestinal loops contain a mild amount of gas. No obvious wall thickening is noted. There is no evidence of a mesenteric mass effect.

HOSPITAL NAME

DPC Veterinary
 Hospital

The colon contains a mild amount of gas in its transverse section and a mild amount of inspissated fecal matter in the descending portion.

The urinary bladder is moderately distended. No evidence of radiopaque calculi is seen.

The kidneys present within normal limits.

REFERRING VET

Dr. White

RADIOGRAPHIC DIAGNOSIS

- Normal radiographic presentation of the abdomen.

INVOICE

55890

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic presentation of the abdomen is within normal limits. Gastroenteropathy, pancreatopathy, and other parenchymal organ disease remain a potential. Further definition by means of full abdominal ultrasound could be considered.
