

**PATIENT**

Violet Dieckmann

**PRESENTING CLINICAL SIGNS**

Patient presented for coughing for the last 4 days. Harsh, almost goose honk, pet otherwise BAR and eating and drinking normally

**SPECIES**

Feline

**RADIOGRAPHIC STUDY OF THE THORAX**

Right/left lateral and ventrodorsal views totaling 4 images available for review.

**BREED**

Siamese

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

**SEX**

FS

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

**AGE**

8 Months

Mild widening of the post-laryngeal upper cervical trachea is seen.

There is mild cervical and cranial thoracic esophageal aerophagia.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

The ribcage is expanded with ventrally diverging intercostal spaces and deep inflation of the lung.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

**HOSPITAL NAME**

Boca Park Animal  
Hospital

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**REFERRING VET**

Dr. Corinna Gorgon

**RADIOGRAPHIC DIAGNOSIS**

- Normal radiographic presentation of the lung and bronchial tree.
- No radiographic evidence of cardiovascular pathology.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**INVOICE**

48807

No specific structural changes of the lung and bronchial tree are identified radiographically. Early lower airway or interstitial inflammation / infection cannot be ruled out based on radiographic findings entirely; however, with the pertinent clinical history, the involvement of the upper respiratory tract should be considered as well.
