

PATIENT

Harley Fowler

PRESENTING CLINICAL SIGNS

Rescan of patient from the other day. Painful at insertion of Psoas muscle.

SPECIES

Canine

ULTRASONOGRAPHIC FINDINGS

Left & Right Iliopsoas

The ultrasonographic study shows the bilateral iliopsoas and psoas major muscles in the sublumbar and inguinal area.

BREED

German Shepherd

The attachment to the lesser trochanter of the femur and musculotendinous junctions are not included.

SEX

Female Spayed

The muscular portions of the iliopsoas present the expected volume, bilateral symmetry, uniform hypoechoic background, and regular echogenic fiber pattern in both short and long axis.

AGE

3 Years

ULTRASONOGRAPHIC DIAGNOSIS

- Normal ultrasonographic presentation of the muscular portions of the iliopsoas muscles in both hind limbs.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The ultrasonographic study did not reveal structural evidence of myopathy of the iliopsoas muscles in the right or left hind limb.

Note that the musculotendinous junctions and tendinous insertion points to the lesser trochanter of the femur are not part of this evaluation.
